

public class Cat{
public String color = "White";
public String action = "sitting";
//your code here
}
public class Test{
public static void main(String [] args){
Cat c1 = new Cat();
Cat c2 = new Cat("Black");
Cat c3 = new Cat("Brown", "jumping");
Cat c4 = new Cat("Red", "purring");
c1.printCat();
c2.printCat();
c3.printCat();
c4.printCat();
c1.changeColor("Blue");
c3.changeColor("Purple");
c1.printCat();
c3.printCat();
}
}

Complete the Cat class so the main method above produces the following output:

White cat is sitting
Black cat is sitting
Brown cat is jumping
Red cat is purring
Blue cat is sitting
Purple cat is jumping
